Project Name

- Study for the progress of workflow in the health screening center (Republic of India)

Cooperation with Local Companies

- In collaboration with SOXO (Republic of India), which uses IT to automate workflows in the healthcare, we try to development AI doctor functions (e.g., explaining the result of health screening to customers) and trial operation at health screening center.

Overview by the AI doctor

×

Consulting with the real doctor

- Address : 2-26-30 Nishi-Azabu, Minato-ku, Tokyo
- Employees : 38,207
- Established in : 1934
- Business : Providing products and services related to healthcare, materials, and imaging

Local Economic / Social Issues

- It is important to establish a system for providing health screening to enable early detection and treatment of diseases.
- To establish the culture of health screening, it is necessary both the efficiency and the quality of health screening services.

Details of Demonstration

- Develop the AI doctor that utilize our natural language processing and image analysis technologies and learn from quality medical data.
- Verify the feasibility and effectiveness of the division of labor between the AI doctor and real doctors, as well as trial the provision of new services such as 24-hour health guidance.

Expected Outcome in the future

- Provide stable health screening services by utilizing the AI doctor to reduce the burden on doctors and improve resource shortages.
- Promote regular health screening by improving satisfaction and health awareness of customers.
- The realization of a society of health through the spread of the culture of health screening.
